It may be that only the figural aspects of mental imagery could be involved in the primary visual areas. Neuropsychological studies of unique cases have demonstrated the existence of a double

dissociation between the object discrimination and the spatial localization in imagery tasks (Levine et al., 1985; Farah et al., 1988). Therefore, it is possible for our CONS task, which is spatial in nature, to be executed without

resorting to the primary visual cortex.

According to Kosslyn's cognitive model, the knowledge representation scheme of mental imagery is composed of two different levels of reasoning, visual and spatial, the former concerned

with what an image looks like, the latter depending on where an object is located relative to other objects.

Visual and Spatial Imagery - unipv responses during imagery similar to responses during perception (ex. w/

faces & places), though a little weaker - weakness supports evidence suggesting more difficult to process mental image than physical one evidence of activation in primary visual cortex - suggests that visual imagery includes

processes*

Mental Imagery Flashcards | Quizlet
*The theory of mental imagery states
that spatial mental images are
processed in a component called*

the spatial-properties-processing subsystem. This subsystem is explicitly linked to the dorsal processing stream, which processes spatial information during visual perception (Kosslyn et al., 2006, p.138). Processing of spatial

mental images uses (at least partly) the same processes used during processing of spatial information in visual perception.

Differences between Spatial and Visual Mental Representations

Mental imagery (varieties of which are sometimes colloquially referred to as “visualizing,” “seeing in the mind's eye,” “hearing in the head,” “imagining the feel of,” etc.) is quasi-perceptual experience; it resembles perceptual experience, but occurs

in the absence of the appropriate external stimuli. It is also generally understood to bear intentionality (i.e., mental images ...
