More recent work has identified a subpopulation of pyramidal neurons in mPFC deep layer V that are depolarized and excited by DOI, indicating hallucinogens induce spontaneous EPSCs by increasing recurrent glutamatergic network activity. 5-HT<sub>2A</sub> receptor activation also increases frequency of spontaneous IPSCs in pyramidal neurons, an effect that is mediated by activation of neighboring GABAergic interneurons.

Recent advances in the neuropsychopharmacology of ...

The basic and clinical sciences of sleep and chronobiology have been the beneficiaries of recent advances in neuroscience, including molecular neurobiology and genomics, cellular physiology,

Recent Advances in Sleep and Chronobiology ...

On June 7–9, 2017, The Canadian College of Neuropsychopharmacology (CCNP) held its 40th Annual Meeting in Kingston, Ontario. At the core of the scientific program were 6 symposia, where clinical and basic neuroscientists pre-sented their ideas and most recent discoveries in the field, significantly advancing our understanding and treatment of

Advances in understanding and treating mental illness ...

This Special Section of the International Journal of Neuropsychopharmacology highlights current progress in paediatric neuropsychopharmacology. Combining critical reviews and, in some cases, data, specific topics include: biological findings in major depression, sleep dysregulation in depression, youth, cardiovascular and ventilatory dysregulation in panic disorder, paediatric autoimmune neuropsychiatric disorder associated with strep (PANDAS), age of onset as a subtype marker and ...
